THE MANCHESTER WAY FOR SMALL AND MEDIUM-SIZED BUSINESSES

Make AI useful.
Start with the work.

The Manchester Way treats a business as a band. Each of seven roles is one part of the work, and each has one plain question. Answer the questions, find the weakest role, and start there.

The AI Supernova is the intent to amplify what makes your business exceptional through ethical, sustainable and human-centred AI.

1 Lead singer / songwriter
The product or service and its distinctive voice.
What makes your offering yours?

2 Lead guitarist
Specialist expertise, craft and innovation.
Which capabilities make you exceptional?

3 Bass guitarist
Data.
Is your data reliable, accessible and understood?

4 Sound engineer
Systems, quality and delivery.
Does the right information reach the right people?

5 Record label
Commercial backing, investment and business model.
How do you fund and support your offering?

6 Audience
Customers and users.
Who are you performing for?

7 Reviews, applause and repeat bookings
Customer insight and measured results.
How do you hear the response?

HOW TO START

Start small. Learn before you expand.

Use the seven questions in a short team conversation. Treat the answers as prompts for discussion, not a score or a diagnosis.

STEP 01

Pick the weakest role

Choose the role where the answer is least clear, or where the work most often goes wrong.

STEP 02

Run one small change

Keep it to one task, one team and one measure of success.

STEP 03

Name one person in charge

One person reviews the results, handles exceptions and decides what happens next.

STEP 04

Review, then move on

Keep, change or stop the change based on what you learned. Then take the next role.

HOW WE HELP

SME workshops

Three formats: an afternoon workshop, a one-company workshop for your own team, or an open session. Workshops are self-sponsored, so your business funds its own place.

AI consultancy

Hands-on support to apply the seven questions to your own work, and to test one change before you roll it out more widely.

Keep responsibility clear. Use approved information, protect sensitive data and keep a person in charge wherever a decision matters. Do not automate a task only because a tool can do it.
